Monthly Market Report

April, 2015

RBI Kept the Repo rate unchanged:

In its first monetary policy meeting for the Financial Year 2015-16, the RBI has kept the repo rate unchanged at the level of 7.5 percent citing lower monetary transmission in the system. It has guided the banks to take action for increased transmission of lower policy rate in the economy. As per the RBI, there are upside risks to the central projection emanating from possible intensification of el niño conditions leading to a less than normal monsoon; which may push up the inflation higher in the coming months. We believe the transmission of the interest rate by the banks will further reduce the borrowing cost in the economy which should boost the demand and investment growth in the economy.

Production growth reported at three month high of 5 percent.

Index for industrial production measures the trend in the production segment of the Indian economy. It continues to remain volatile over the last few months. During February 2015 it reported at 5 percent compared to 2.6 percent in January 2015. The volatility is largely because of the growth in manufacturing sector which continues to swing between positive and negative territory. During the month, it reported growth of 5.2 percent against 3.4 percent reported in last month. The other two segments, Mining and Electricity grew by 5.9 percent and 2.5 percent respectively. We believe production activity to pick up in last quarter of current financial year driven by policy action by new government and demand revival in the general economy.

Foreign Trade Balance Deficit came at USD11.8bn:

The foreign trade balance defined as import over exports, came at USD 11.8bn in March 2015 compared to USD 6.85bn reported in Feb 2015. The increase in the deficit is largely on account of lower export growth. During the month, exports contracted by 21 percent on YoY basis and came at 23.95bn. Import bill came at USD 35.7bn, a contraction of 13 percent YoY. The reduction in import bill is largely due to lower crude prices. In March, the share of oil import bill stands at 20 percent, lowest in many quarters. We believe the export growth is the key to maintain the trade balance at the comfortable level. Reduction in oil prices results in some temporary reduction in import bill. However, material reduction will be driven by improvement in the export growth which largely depends on the government policies and investment environment in the economy.

USD/INR Exchange Rate

The Indian Rupee exchange rate for April 2015, averaged at 62.7584 INR to USD. The high was 63.5625 while the low for the month was 62.1888.

WPI inflation remain Negative though Retail CPI inflation remains at 5.17 percent

WPI inflation, in March, came in at -2.33 percent from -1.06 percent in February. WPI was in the deflationary zone for the fifth successive month, with sharp fall in fuel index and fall in manufacturing commodities. All the major WPI indices (primary, food, fuel and manufacturing) fell MoM on falling fuel and other commodity prices. Food inflation rose 6.31 percent YoY compared with 7.7 percent in the previous month. Primary articles inflation, in February was 0.08 percent, Fuel inflation was -1.19 percent, Manufacturing was -0.19 percent. WPI has remained in the deflationary zone despite reversal of favorable base impact, which not only shows the impact of fall in global commodities but also the moderation in domestic demand. Even though the headline inflation is negative, food inflation continues to remain at higher level and may pose concern for the overall number in the coming month when base effect neutralize. CPI number at 5.17 percent is lower than RBI's target level of 6 percent. However, given the current unseasonal rains, RBI may will take some more time before further easing of the interest rate.

Debt Market Update

Yield on the 10-year benchmark paper rose 14 basis points (bps) to 7.86 percent from a low of 7.72 percent despite the fact that inflation as measured by the consumer price index was at 5.17 percent for March, down 20 bps compared to February. The hardening in yields can be attributed in part to higher inflationary expectations as crude oil prices surged from USD 56 a barrel to USD 66, lack of clarity on minimum alternate tax and status quo maintained by the Reserve Bank of India in its bi-monthly Monetary Policy. The central bank chose to wait for more clarity on the risks to inflation and transmission of recent rate cuts before lowering interest rates further.

Equity Market Update

Global market started the month on jittery note as crude price trended upward on the back of the unrest in the middle-east region. Saudi Arabia's attack on Yemen has created disruptions in the oil market. On the other side, Greece debt crisis continued to hound the European markets as investors fearing default on the same.

On the domestic side, Indian equity markets started the month on positive sentiment fuelled lower inflation data and hope of some more easing of interest rates by RBI. However, RBI didn't do any changes in the interest rate citing a slower monetary transmission of rate by the banks to the economy. It also highlighted the upside risk to inflation because of the unseasonal rains in the last two months. According to the estimates approx. 30 percent of the acreage of Rabbi Crop has been lost because of the unseasonal rains. This has raised concerns of slowing growth in the rural economy which has been the demand driver for the economy since last few years. Rising Crude oil prices, anticipation of rate hike by US Fed and slowing economy has led to negative sentiment in the market. Investors were also concerned about the tax demand made by Government on the various FII's under the Minimum alternate tax provision. This has raised concerns about flow of foreign capital in the economy. On the back of all these events, both the key indices have lost approx. 3.5 percent in April 2015.

Relative Performance of Sector Indices vs Broader Market

On the sectoral front, only Metal sector has posted a strong positive return of 3.5 percent and outperformed the broader markets. On the other side, IT (-8.6 percent), Pharma (-6.1 percent) and Auto (-4.8 percent) underperformed the broader markets.

Market Valuations: At the current levels of ~27011, Sensex with an expected EPS of 1820 for FY16E trades at a PE of ~14.8x 1-year forward. The valuation multiple has rebounded from its bottom to some extent and is trading near to its historical 10 year average of 16.5x. However, we see a cycle of earnings upgrades by various analysts driven by improved policy environment and economic recovery. We believe the current multiple doesn't factor in most of these attributes and thus we believe the valuations are still attractive for the long term investment.

Fund Flows: Foreign Institutional Investors (FIIs) were net buyers during the month to the tune of INR11720Cr. Domestic Institutional Investors (DIIs) too were net buyers to the tune of INR 7618crores worth of shares during the month.

Sectoral Update

Oil & Gas: Government measures since January 2013 to curb the subsidy burden on petro – products viz.; a. Market – linked pricing for bulk diesel. b. Small increases at regular intervals in retail diesel prices would benefit both upstream and downstream PSU Oil companies. Refining margins to track the demand – supply scenario and remain volatile in a range. Potential gas price hike is another positive for PSU upstream companies. Thus, we continue to remain upbeat about PSU upstream oil companies.

Information Technology: Factors such as mixed signs of recovery in US economy, uncertainty over immigration bill in US and situation in Euro-region hanging by a thread, it might take longer than expected for key areas such as BFSI / discretionary spends to kick-in. Even though the outlook remains a bit hazy for the sector, the current valuations coupled with favorable USD-INR equation (for IT Sector) offer good entry points with favorable risk-reward. Hence it would be prudent to maintain Overweight stance on the sector.

Auto: Auto sales numbers continue to remain at comfortable level and are expected to inch up in the next fiscal, once the interest rates in the system starts going down. New launches, both in two-wheeler and four-wheeler will keep the demand in momentum and augur well for the auto and auto ancillary companies.

Banking: The inflation rate seems to be coming near to the range acceptable by RBI and we may see some policy action by RBI to revive growth. The initial signs of the same came when it gave some relaxation in treatment of long term loan to infrastructure and issuance of bonds to finance the same. We look forward to a rate reduction cycle which we believe should start during 2nd half of the current financial year.

We expect the sectors such as FMCG, Consumption and Oil & Gas would outperform and will maintain an overweight stance in these sectors. We continue to be cautious on metals due to slow down in China and global weakness.

Equity Market Outlook:

The global markets are reeling under pressure of increased geo political tension. The latest addition is the conflict in the Middle-east, the key crude producing regions. This has resulted in spike in crude which was on its downtrend. The Greece debt crisis again came back in the news and questions are being raised on its continuation in the European Union.

On the domestic front, the markets are expected to remain on the shaky ground as risk emerges on the near term economic growth. In spite of the strong majority, Government is not able to get clear the key legislations in the parliament. This is creating a sense of impatient and concerns among the corporates and investors. The Government is also battling investors' concerns about the tax policy on the foreign investors. However, the positive factors may emerge from the improvement in the key macroeconomic indicators like Inflation, IIP and PMI index. With the easing of monetary stance from RBI, we may see some uptick in the investment activity in the economy which may improve the growth dynamics in the economy. Much of the future growth dynamics will depend on the continuation of the government's efforts to address the revival of the investment cycle. However, the risk to the economic growth may emerge from the divergent monetary policy pursued by the central banks of the developed markets and strengthening of dollar index.

In the present time of buoyancy in the market and positive sentiment, we continue to remain cautious on the market valuation. The current run up has bought the valuation near to the long term average level and any further up-move needs to be supported by increase in earnings growth. We believe the current growth estimates doesn't factor in the impact of 1) drop in crude prices 2) positive FII flows and 3) Stable monsoon on the economic growth. These factors should lead to incremental positive growth for the economy and should translate into higher corporate earnings growth. The higher earnings will bring down the multiple used for valuation comparison and will further boost the market sentiment. Thus, we continue to believe that any corrections can be used by investors to invest with a view of 4-5 years.

Fund Manager's Comments

April, 2015

Fund Manager's Comments on Equity Portfolio

In the month of April 2015, the domestic markets posted losses with the benchmark indices, Sensex and Nifty ending lower by ~3.5 percent each. This is the second consecutive month of decline (Indices ended lower by ~4.5 percent in March). Indian equity markets started the month on positive sentiment fuelled lower inflation data and hope of some more easing of interest rates by RBI. However, RBI maintained status quo citing a slower monetary transmission of rate by the banks to the economy. It also highlighted the upside risk to inflation because of the unseasonal rains in the last two months. Rising Crude oil prices, anticipation of rate hike by US Fed and slowing economy were some of the concern points leading to negative sentiment in the market. Investors were also concerned about the tax demand made by Government on the various FIIs under the Minimum Alternate Tax provision raising concerns about flow of foreign capital in the economy. On the back of all these events, both the key indices have lost approx. 3.5 percent in April 2015. Going ahead, apart from the global cues, the domestic macro indicators, policy actions by the government, the ongoing 4QFY15 earnings season and the RBI's stance in the upcoming monetary policy will be keenly watched for cues.

Global market started the month on jittery note as crude prices trended upwards on the back of the unrest in the middle-east region. Saudi Arabia's attack on Yemen created disruptions in the oil market. On the other side, Greece debt crisis continued to haunt the European markets as fears of default emerged again. Overall the macro economic data from US was encouraging.

During the month, we continued to be over-weight on Pharma and other consumption themes. Going ahead, we would tactically take a call on cash levels based on market movement and attractiveness of individual sectors/ companies. The exposure to equity will be tilted towards low beta stocks that are having attractive value proposition.

Fund Manager's Comments on Debt Portfolio

Yield on the 10-year benchmark paper rose 14 basis points (bps) to 7.86 percent during April 2015 from a low of 7.72 percent despite the fact that inflation as measured by the consumer price index was at 5.17 percent for March, down 20 bps compared to February. The Gilt yields have further hardened to 8 percent in the first week of May 2015. The hardening in yields can be attributed in part to higher inflationary expectations as crude oil prices surged from \$56 a barrel to \$66, lack of clarity on minimum alternate tax and status quo maintained by the Reserve Bank of India in its bi-monthly Monetary Policy. The central bank chose to wait for more clarity on the risks to inflation and transmission of recent rate cuts before lowering interest rates further. The market participants are in a wait and watch situation regarding the monsoon and the crude oil prices. The FPI investors have been selling small portions of their portfolio. Since growth has been subdued and inflation is low, we do not expect the rates to increase further.

Glossary

Standard Deviation

Standard deviation is a measure of volatility of returns of the portfolio from the average returns. The lower the standard deviation, the better it is.

Sharpe Ratio

Sharpe ratio is arrived at by dividing the returns in excess of risk-free return with the standard deviation of portfolio returns and is a measure of risk adjusted returns. Higher the Sharpe ratio, the better it is.

Portfolio Beta

Beta is a measure of volatility of the portfolio with respect to the market, also known as systematic risk. A beta measure of 1 indicates that the portfolio value moves with benchmark / market. Any value greater than 1 indicates that the portfolio is more volatile than the benchmark / market and vice versa.

Tracking Error

The tracking error is an estimation of the variability in a scheme's performance vis-à-vis the index that it tracks. This measure is used for index schemes which have an investment objective to track the performance of stated market index. Lower tracking error signifies Fund returns are close to the benchmark Index Returns

Average Maturity

Average maturity is the weighted average residual maturity of the portfolio. A portfolio consisting of longer dated security has higher average maturity.

Modified Duration

Modified duration measures the price sensitivity of a fixed income security or portfolio of fixed income securities with interest rate. It is used to determine the effect of a 100-basis-point (1 percent) change in interest rates on the value of portfolio of fixed income securities. A portfolio consisting of longer dated securities is more sensitive to the changes in interest rate as compared to a portfolio with shorter dated securities.

Credit Profile of Investments

Credit profile gives the break-up of portfolio across rating categories..

Annualized Returns

Returns calculated on an annual basis are called annualised returns. For period less than a year, returns are simple annualized. For periods more than a year, compounded annualized growth rate (CAGR) returns are used as annualized returns.

Summary of performance of Funds vs. Benchmark (as on April 30, 2015)

Unit Linked Insurance Plans - Individual policyholders

Note:

1. The above summary is based on the data as on April 30, 2015
2. Equity Fund - Returns less than year are Absolute & Returns over one year are CAGR (Compound Annual Growth Rate)
3. Debt Fund - Returns less than year are simple annualised & Returns over one year are CAGR (Compound Annual Growth Rate)
4. Past performance may or may not be sustained in future and is not a guarantee of future performance

Funds at a Glance

Name of the Fund	Equity Fund/Equity Pension Fund		
Nature of the Fund	Equity Growth Fund - Primarily invested in equity		
Investment Objective	To provide high growth opportunities with an objective of long term capital appreciation through investments primarily in equity and equity related instruments		
Fund Positioning	This Fund is positioned as a diversified equity fund with a moderate exposure to mid-cap stocks. The aim of the Fund is to provide a stable and sustainable relative out performance vis-à-vis the benchmark. The Fund will stick to the theme of discipline, diligence and dividend yield while selecting equity stocks. The Fund will have an exposure of upto 30 percent to mid-cap companies. The remaining exposure will continue to be in large-cap companies.		
Asset Allocation	Equity	Debt	Money market
Minimum	80	0	0
Maximum	100	10	20
Chief Investment Officer	A. K. Sridhar		
Fund Manager	Prasanna Pathak		
Date of Launch	November 25, 2009		
Net Asset Value	Declared every business day		
Fund's Fact Sheet	Published monthly		
Benchmark Index - Composition	CNX NIFTY Index - 90 percentage weight CRISIL - CBLO Index - 10 percentage weight		

Name of the Fund	Debt Fund/Debt Pension Fund		
Nature of the Fund	Primarily invested in debt instruments		
Investment Objective	To generate a good level of income and prospects for capital growth through diversified investment in corporate debt instruments, government securities and money market investments		
Fund Positioning	This fund is positioned as a pure debt oriented fund, with asset allocation pattern providing a good opportunity to provide consistent and sustainable returns. The debt portfolio will comprise of high rated debt instruments with a low to moderate liquidity, government securities and money market investments with very high safety and easy liquidity. The asset allocation between corporate debt and government securities/money market investments and the portfolio duration of the fund, will follow a macro level economic scenario while the individual corporate debt investments will follow with a micro level credit worthiness and debt servicing capacity of companies

Fund Manager's Comments

In the month of April 2015, the domestic markets posted losses with the benchmark indices, Sensex and Nifty ending lower by ~3.5 percent each. This is the second consecutive month of decline (Indices ended lower by ~4.5 percent in March). Indian equity markets started the month on positive sentiment fuelled lower inflation data and hope of some more easing of interest rates by RBI. However, RBI maintained status quo citing a slower monetary transmission of rate by the banks to the economy. It also highlighted the upside risk to inflation because of the unseasonal rains in the last two months. Rising Crude oil prices, anticipation of rate hike by US Fed and slowing economy were some of the concern points leading to negative sentiment in the market. Investors were also concerned about the tax demand made by Government on the various FII's under the Minimum Alternate Tax provision raising concerns about flow of foreign capital in the economy. On the back of all these events, both the key indices have lost approx. 3.5 percent in April 2015. Going ahead, apart from the global cues, the domestic macro indicators, policy actions by the government, the ongoing 4QFY15 earnings season and the RBI's stance in the upcoming monetary policy will be keenly watched for cues.

Global market started the month on jittery note as crude prices trended upwards on the back of the unrest in the middle-east region. Saudi Arabia's attack on Yemen created disruptions in the oil market. On the other side, Greece debt crisis continued to haunt the European markets as fears of default emerged again. Overall the macro economic data from US was encouraging.

During the month, we continued to be over-weight on Pharma and other consumption themes. Going ahead, we would tactically take a call on cash levels based on market movement and attractiveness of individual sectors/ companies. The exposure to equity will be tilted towards low beta stocks that are having attractive value proposition

Equity1 Fund (SFIN: ULIF009010910EQUY1FUND143)

Fact Sheet for April 2015 (based on portfolio as on 30.04.2015)

Investment Objective

To provide high growth opportunities with an objective of long term capital appreciation through investments primarily in equity and equity related instruments.

Fund Manager's Comments

In the month of April 2015, the domestic markets posted losses with the benchmark indices, Sensex and Nifty ending lower by ~3.5 percent each. This is the second consecutive month of decline (Indices ended lower by ~4.5 percent in March). Indian equity markets started the month on positive sentiment fuelled lower inflation data and hope of some more easing of interest rates by RBI. However, RBI maintained status quo citing a slower monetary transmission of rate by the banks to the economy. It also highlighted the upside risk to inflation because of the unseasonal rains in the last two months. Rising Crude oil prices, anticipation of rate hike by US Fed and slowing economy were some of the concern points leading to negative sentiment in the market. Investors were also concerned about the tax demand made by Government on the various Fills under the Minimum Alternate Tax provision raising concerns about flow of foreign capital in the economy. On the back of all these events, both the key indices have lost approx. 3.5 percent in April 2015. Going ahead, apart from the global cues, the domestic macro indicators, policy actions by the government, the ongoing 4QFY15 earnings season and the RBI's stance in the upcoming monetary policy will be keenly watched for cues.

Global market started the month on jittery note as crude prices trended upwards on the back of the unrest in the middle-east region. Saudi Arabia's attack on Yemen created disruptions in the oil market. On the other side, Greece debt crisis continued to haunt the European markets as fears of default emerged again. Overall the macro economic data from US was encouraging.

During the month, we continued to be over-weight on Pharma and other consumption themes. Going ahead, we would tactically take a call on cash levels based on market movement and attractiveness of individual sectors/ companies. The exposure to equity will be tilted towards low beta stocks that are having attractive value proposition

This Fund might take a slightly higher exposure to Mid-Cap and Value stocks, if they are available at attractive valuations. The mid-cap exposure may range between ~10- 25 percent. Remaining exposure is to large-cap companies from Nifty/BSE 100 Index.

Balanced Fund (SFIN: ULIF005161109BALANCEDFN143)

Fact Sheet for April 2015 (based on portfolio as on 30.04.2015)

Investment Objective

To provide higher growth with reasonable security, by investing primarily in equity instruments and moderate allocation in debt securities/ bonds.

Fund Manager's Comments

The funds under the Liquid Fund category continued to be invested in highly liquid short term papers having very high safety and liquidity, as per the investment mandates, set out for this fund.

Value Fund (SFIN: ULIF013010910VALUEFUND0143)

Fact Sheet for April 2015 (based on portfolio as on 30.04.2015)

Investment Objective

To provide high growth opportunities with an objective of long term capital appreciation through investments primarily in equity and equity related

Name	Date of Inception	NAV as on April 30, 2015
Value Fund	16-Sep-10	₹ 15.09

Targeted Asset Allocation Pattern in Percentage

	Minimum	Maximum	Actual
Equity Shares	70	100	95
Debt Securities and Bonds	0	0	0
Cash and Money Market Investments	0	30	5

The actual asset allocation will remain within the 'minimum' and 'maximum' range based on market opportunities and future outlook of the markets.

Fund Positioning

The Fund will be positioned as a multi-cap pure value fund with clearly defined investment criteria for investing in value stocks. The Fund will invest in stocks that are relatively undervalued to their intrinsic value and which will create wealth for shareholders in the medium to long term.

Asset Allocation Pattern as on April 30, 2015

Industry -wise Exposure

Fund Manager's Comments

The Value Fund invests in stocks which offer better value-proposition vis-a-vis peers based on strategies laid out in the Fund's investment mandate. In the initial phase, the tilt has been more towards large-cap stocks. This conscious short term strategy, has worked well as can be seen by the fund out-performance. We have started to increase the exposure to value and mid-cap stocks, to bring in more of value orientation.
