Monthly Market Report

February, 2014

Economic growth slows down in Q3FY14

During the quarter ended December 2013, the economic growth in the country has slowed down to 4.7 percent YoY because of lower growth in the industrial segment. Industrial segment actually declined 0.7 percent YoY reflecting the sluggishness in the sector. The lower growth in Industry got offset by the strong growth in services segment which grew by 7.6 percent YoY. The economic activity in the country continues to remain lackluster and is failed to pick up despite of the various policy measures taken by the Government. The full year economic growth may be below the CSO guided number of 4.9 percent for FY14. Going ahead we see a gradual recovery in the economic activity which should start unfolding post the general election. However, it may be a prolonged gradual recovery rather than a sharp increase.

Production Growth remained in negative territory:

Production growth in economy, measured by Index of Industrial Production (IIP) remained in the negative zone. It came at -0.6 percent for the month of December 2013 marking a third straight monthly drop in the industrial activity. The production segment is defined in three broad categories manufacturing, electricity and mining. During the month, manufacturing segment continued showing de-growth as it went down by 1.6 percent. Mining segment saw some moderation in growth as it grew by just 0.4 percent. However, electricity generation increased during the month by 7.5 percent. We believe the IIP growth may pick up as we are witnessing incremental improvement in the industrial activity and looking for more consistency in the trend. Till then we remain cautious on the growth revival both in the broader economy as well as manufacturing sector.

Foreign Trade Balance Deficit at USD 9.91bn in January 2014

The foreign trade balance defined as import over exports, came at slightly lower value of USD9.91bn for the month of January 2014 compared to USD10.2bn reported in December 2013. During the month, exports grew by 3.79 percent while the imports fell by 18.07 percent as the precious commodity prices continues to remain benign. Oil imports bill saw a decline of 10.09 percent and constitutes 36 percent of the total import bill. Since the last few months, effect of measures taken by Both RBI and Government to reduce trade deficit is getting reflected in the lower trade deficits and the consistency in these numbers reflects the effectiveness of the measures. The continued improvement in the trade balance should help in reducing the current account deficit which will support the currency in the near term.

USD/INR Exchange Rate

The Indian Rupee exchange rate for February 2014, averaged at 62.2295 INR to USD. The high was 62.6575 while the low for the month was 62.6575.

Inflation in the Economy eases to 5.05 percent

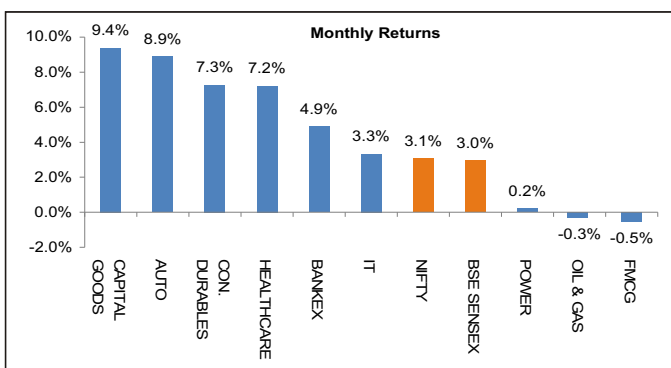

WPI inflation for January fell sharply to 5.05 percent from 6.16 percent in December on the back of sharp fall in the food prices. Food inflation fell to 8.8 percent from 13.68 percent in the previous month as vegetable inflation came down to 16.6 percent compared to 57 percent. However, the other inflation indicator CPI continues to remain on at the elevated level of 8.79 percent which is above the RBI's comfort level. We believe the WPI inflation to remain at the current level for some time before coming down while CPI may remain sticky given high weight to the food basket.

Debt Market Update

The RBI gave a surprise rate hike of 25bps in the repo rate. This was despite the fact that inflation (both WPI and CPI had softened significantly). The 10 year G-sec was range bound during the month- the highest yield was 8.92 percent and the lowest was 8.68 percent. The RBI also stated that further rate hike was not anticipated. The yields have steadily increased despite further softening of inflation and no supply of g-sec in February. The market expects the FY 15 borrowing programme to be very huge and do not expect any rates cuts in the near future.

Equity Market Update

Global market started the month on a negative note as sudden fall in emerging market currencies created flutter among the emerging market participants. The fall was further aggravated as macroeconomic data in Chinese economy hinted towards a slowdown. However, the market sentiments recovered on the back of positive macroeconomic data from the US economy and improvement in the currency market. Overall during the month, global markets have gained anywhere between 3 percent-4 percent

On the domestic side, increase in the interest rate by RBI spooked the market which was already under the pressure of the currency crisis in the emerging market economies. The Q3FY14 corporate earnings were mixed and failed to cheer up the market sentiments. The interim budget for FY15 remained a nonevent in the absence of any major policy decision. The Finance Minister tried to walk a strict path of fiscal consolidation and guided for a fiscal deficit of 4.2 percent in FY15. On the economic front, macroeconomic data remained lackluster with WPI inflation at 5.05 percent brought some cheers. The FII flow continues to remain positive which further helped the market to inch up higher during the last few trading session of the month. Overall Nifty posted gain of 3.1 percent while Sensex gained approx 3 percent during the month.

Relative Performance of Sector Indices vs Broader Market

On the sectoral front, Key sector outperformed the broader market led by capital goods which gained 9.4 percent followed by Auto (8.9 percent), Consumer Durable (7.3 percent), healthcare (7.2 percent) and bankex (4.9 percent). FMCG sector underperformed (-0.5 percent) followed by Oil & Gas (-0.3 percent) and Power 0.2 percent.

Market Valuations: At the current levels of ~21120, Sensex with an expected EPS of 1508 for FY15E trades at a PE of ~14x 1-year forward. The valuation multiple even though rebounded from its bottom to some extent; it still remains below the historical 10 year average of 16.5x. We believe the current multiple factors in most of the present risk and valuations are attractive for the long term.

Fund Flows: Foreign Institutional Investors (FIIs) were net buyers to the tune of Rs.1404cr, while Domestic Institutional Investors (DIIs) were net Sellers to the tune of Rs.1207cr worth of shares during the month.

Sectoral Update

Oil & Gas: Government measures since January 2013 to curb the subsidy burden on petro products viz.; a. Market linked pricing for bulk diesel. b. Small increases at regular intervals in retail diesel prices would benefit both upstream and downstream PSU Oil companies. Refining margins to track the demand supply scenario and remain volatile in a range. Potential gas price hike is another positive for PSU upstream companies. Thus, we continue to remain upbeat about PSU upstream oil companies.

Information Technology: Factors such as mixed signs of recovery in US economy, uncertainty over immigration bill in US and situation in Euro-region hanging by a thread, it might take longer than expected for key areas such as BFSI / discretionary spends to kick-in. Even though the outlook remains a bit hazy for the sector, the current valuations coupled with favorable USD-INR equation (for IT Sector) offer good entry points with favorable risk-reward. Hence it would be prudent to maintain Overweight stance on the sector.

Auto: Auto sales numbers continue to remain at comfortable level and are expected to inch up in the next fiscal, once the interest rates in the system starts going down. New launches, both in two-wheeler and four-wheeler will keep the demand in momentum and augur well for the auto and auto ancillary companies.

Banking: The RBI has resorted to indirect increase in the interest rate to reduce the forex volatility. The longer the measure continues, the higher the negative impact it will have on the economic recovery and will also add to the NPA problem for the banks. Going ahead, RBI has signaled that focus would shift for growth management once the stability is restored in the forex market.

We expect the sectors such as FMCG, Consumption and Oil & Gas would outperform and will maintain an overweight stance in these sectors. We continue to be cautious on metals due to slow down in China and global weakness.

Market Outlook:

The global market continues to remain stable backed by the stable growth in the developed market and subsidizing of the issue of the emerging market currency crisis. The geo political situation on the Ukraine seems to be settling down which should build up some positive sentiments among global market investors.

On the domestic front, the focus of the market participants will be on the evolving political situation and the general election. The election will be held in the April May 2014 and the result will be out on May 16, 2014. The market should remain in a range for the next two months and clear trend should emerge post general election. On the macroeconomic front, we believe the economy seems to be better placed compared to May June2013 period in terms of the improvement Current Account Deficit, stable growth matrix and reduced uncertainty on the Government Finances. These attributes should eventually help in attracting the global investors in the medium term. The key risk to this situation would be fractured mandate in the upcoming General election as it could result in continued deadlock on the policy actions as well as implementation and potentially derail the economic growth.

In the present time of cautiously optimistic scenario of economic growth, we continue to remain selective on security selection in our portfolios and focus on stocks with strong balance sheet and minimal earnings volatility. We believe the market valuation continues to remain attractive from a long term perspective and one should look for an investment horizon of 4-5 years for better returns.

Fund Manager's Comments

February, 2014

Fund Manager's Comments on Equity Portfolio

In the month of February 2014, the domestic markets posted gains with the benchmark indices, Sensex and Nifty ending higher by ~3.1 percent and ~3 percent respectively. During the early part of the month, the markets were spooked by increase in interest rate by RBI and currency depreciation seen across all emerging market economies. Domestically, Q3FY14 corporate earnings were mixed and failed to cheer up the market sentiments. The interim budget for FY15 remained a non-event in the absence of any major policy decision. On the economic front, macroeconomic data remained lackluster with WPI inflation at 5.05 percent bringing some cheers. The FII flow continued to remain positive which helped the market to inch up higher during the last few trading session of the month. Going ahead, the election dynamics, key macroeconomic indicators and the global cues would be keenly watched.

During the month, we continued to be over-weight on Pharma and other consumption themes. Going ahead, we would tactically take a call on cash levels based on market movement and attractiveness of individual sectors/ companies. The exposure to equity will be tilted towards low beta tocks that are having attractive value proposition.

Fund Manager's Comments on Debt Portfolio

The government securities market is range bound with the bias towards yields still inching up. This is mainly due to the RBI's view on the interest rates. While the RBI has signalled that further rate hikes are now unlikely, rate cuts will probably require a further correction in the CPI and the core CPI in particular. Until now, headline CPI has declined significantly and is moving towards the RBI's target of 8 percent but core CPI is proving to be stubborn.

Also, although there is no fresh supply in G-sec this month, the yields are still headed northwards on the back of huge fresh supplies in the month of April 2014. The FY 15 market borrowing figure of Rs 597000 cr as disclosed in the Vote on Account looks to be highly optimistic and the market believes that there will be at least additional borrowing of about Rs 40000 cr. Also, there is less demand for G-sec from the banking sector as it is already excess SLR.

However, on absolute levels, the g-sec yields are at 12 year highs for a prolonged period of 6 months at a stretch and is therefore attractive. We will be looking to invest in all segments of the yield curve - mainly in the short and medium which offers the best risk adjusted return in the near term.

Glossary

Standard Deviation

Standard deviation is a measure of volatility of returns of the portfolio from the average returns. The lower the standard deviation, the better it is.

Sharpe Ratio

Sharpe ratio is arrived at by dividing the returns in excess of risk-free return with the standard deviation of portfolio returns and is a measure of risk adjusted returns. Higher the Sharpe ratio, the better it is.

Portfolio Beta

Beta is a measure of volatility of the portfolio with respect to the market, also known as systematic risk. A beta measure of 1 indicates that the portfolio value moves with benchmark / market. Any value greater than 1 indicates that the portfolio is more volatile than the benchmark / market and vice versa.

Tracking Error

The tracking error is an estimation of the variability in a scheme's performance vis-à-vis the index that it tracks. This measure is used for index schemes which have an investment objective to track the performance of stated market index. Lower tracking error signifies Fund returns are close to the benchmark Index Returns

Average Maturity

Average maturity is the weighted average residual maturity of the portfolio. A portfolio consisting of longer dated security has higher average maturity.

Modified Duration

Modified duration measures the price sensitivity of a fixed income security or portfolio of fixed income securities with interest rate. It is used to determine the effect of a 100-basis-point (1 percent) change in interest rates on the value of portfolio of fixed income securities. A portfolio consisting of longer dated securities is more sensitive to the changes in interest rate as compared to a portfolio with shorter dated securities.

Credit Profile of Investments

Credit profile gives the break-up of portfolio across rating categories..

Annualized Returns

Returns calculated on an annual basis are called annualised returns. For period less than a year, returns are simple annualized. For periods more than a year, compounded annualized growth rate (CAGR) returns are used as annualized returns.

Fund Manager's Comments

In the month of February 2014, the domestic markets posted gains with the benchmark indices, Sensex and Nifty ending higher by ~3.1 percent and ~3 percent respectively. During the early part of the month, the markets were spooked by increase in interest rate by RBI and currency depreciation seen across all emerging market economies. Domestically, Q3FY14 corporate earnings were mixed and failed to cheer up the market sentiments. The interim budget for FY15 remained a non-event in the absence of any major policy decision. On the economic front, macroeconomic data remained lackluster with WPI inflation at 5.05 percent bringing some cheers. The FII flow continued to remain positive which helped the market to inch up higher during the last few trading session of the month. Going ahead, the election dynamics, key macroeconomic indicators and the global cues would be keenly watched.

During the month, we continued to be over-weight on Pharma and other consumption themes. Going ahead, we would tactically take a call on cash levels based on market movement and attractiveness of individual sectors/ companies. The exposure to equity will be tilted towards low beta tocks that are having attractive value proposition.

Equity1 Fund (SFIN: ULIF009010910EQUITY1FUND143)

Fact Sheet for February 2014 (based on portfolio as on 28.02.2014)

Investment Objective

To provide high growth opportunities with an objective of long term capital appreciation through investments primarily in equity and equity related instruments.

Name	Date of Inception	NAV as on February 28, 2014
Equity1 Fund	15-Sep-10	₹ 11.09

Targeted Asset Allocation Pattern in Percentage

	Minimum	Maximum	Actual
Equity Shares	80	100	92
Debt Securities and Bonds	0	10	0
Cash and Money Market Investments	0	20	8

The actual asset allocation will remain within the 'minimum' and 'maximum' range based on market opportunities and future outlook of the markets.

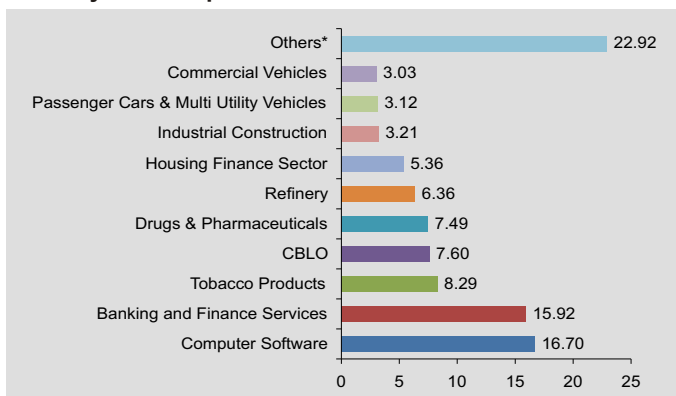

Fund Positioning

This Fund is positioned as a highly diversified equity fund aiming to provide a stable and sustainable relative out performance vis-à-vis the benchmark. The fund will stick to the theme of discipline, diligence and dividend yield while selecting equity stocks. It will invest at least 70 percent of its exposure to equity in large cap stocks (from S&P CNX Nifty Index or BSE 100 Index) and the remaining may be invested in mid/ small-cap equity stocks.

Asset Allocation Pattern as on February 28, 2014

Fund Manager's Comments

The funds under the Liquid Fund category continued to be invested in highly liquid short term papers having very high safety and liquidity, as per the investment mandates, set out for this fund.

Value Fund (SFIN: ULIF013010910VALUEFUND0143)

Fact Sheet for February 2014 (based on portfolio as on 28.02.2014)

Investment Objective

To provide high growth opportunities with an objective of long term capital appreciation through investments primarily in equity and equity related

Name	Date of Inception	NAV as on February 28, 2014
Value Fund	16-Sep-10	₹ 11.39

Targeted Asset Allocation Pattern in Percentage

	Minimum	Maximum	Actual
Equity Shares	70	100	84
Debt Securities and Bonds	0	0	0
Cash and Money Market Investments	0	30	16

The actual asset allocation will remain within the 'minimum' and 'maximum' range based on market opportunities and future outlook of the markets.

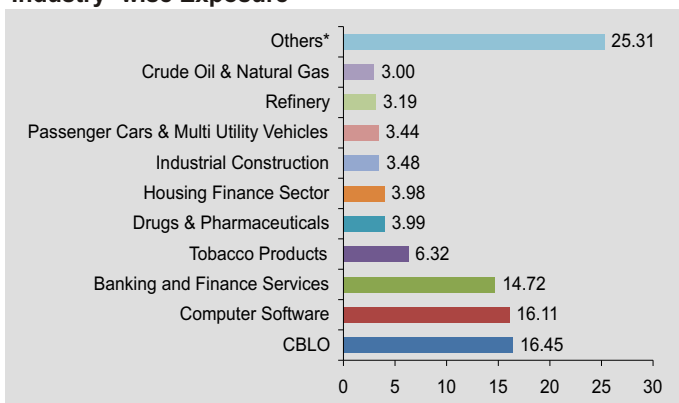

Fund Positioning

The Fund will be positioned as a multi-cap pure value fund with clearly defined investment criteria for investing in value stocks. The Fund will invest in stocks that are relatively undervalued to their intrinsic value and which will create wealth for shareholders in the medium to long term.

Asset Allocation Pattern as on February 28, 2014

Industry -wise Exposure

Fund Manager's Comments

The Value Fund invests in stocks which offer better value-proposition vis-a-vis peers based on strategies laid out in the Fund's investment mandate. In the initial phase, the tilt has been more towards large-cap stocks. This conscious short term strategy, has worked well as can be seen by the fund out-performance. We have started to increase the exposure to value and mid-cap stocks, to bring in more of value orientation, as the risk-reward appears to be favorable now.

** Refer "Features of our Funds" for Details

Fund Manager's Comments

The Fund will be managed passively by investing in all the Nifty 50 Stocks in a proportion that is as close as possible to the weightages of these stocks in the S & P CNX Nifty index. Under Index Funds, tracking error normally occurs due to intra day price movements, cost of transaction, fund management expenses charges, dividend inflows. In addition, limiting the actual exposures to the extent allowed by regulatory norms also contribute to tracking error in certain scrips. The investment strategy is to keep the tracking error low and deliver the returns as close to the returns delivered by the benchmark index. The Fund will optimally use the portfolio re balancing techniques combined with least possible transaction cost to keep the tracking error low.

Dynamic Asset Allocation Fund (SFIN: ULIF015080811DYAALLFUND143)

Fact Sheet for February 2014 (based on portfolio as on 28.02.2014)

Investment Objective

To provide higher growth with reasonable security, by investing primarily in equity instruments and moderate allocation in debt securities/bonds.

Name	Date of Inception	NAV as on February 28, 2014
Dynamic Asset Allocation Fund	09-Sep-11	₹ 13.86

Targeted Asset Allocation Pattern in Percentage

	Minimum	Maximum	Actual
Equity Shares	0	100	58
Debt Securities and Bonds	0	100	10
Cash and Money Market Investments	0	20	32

The actual asset allocation will remain within the 'minimum' and 'maximum' range based on market opportunities and future outlook of the markets.

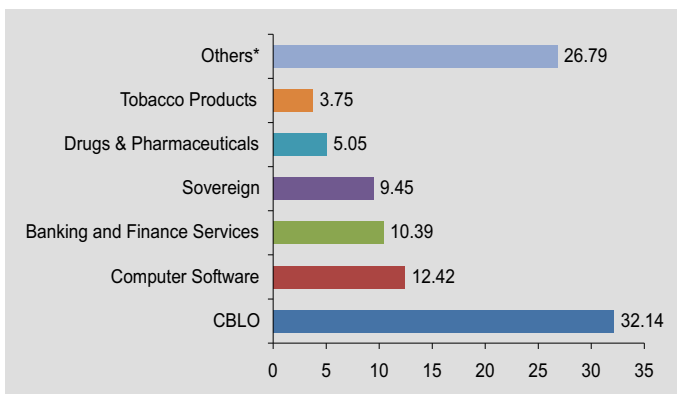

Fund Positioning

This Fund is positioned as a balanced mix of debt and equity, with the asset allocation pattern providing a good opportunity to provide consistent and sustainable returns. The equity portion will have a highly diversified portfolio with high liquidity while the debt portion will comprise of high rated debt instruments with a low to moderate liquidity. The asset allocation will follow a macro level market scenario and the individual stock selection will be with micro level performance expectations of the stocks and securities.
